DANIEL DEMALSH

Middle Fullstack Developer

📞 +251920615870   @ danielddemissie@gmail.com   🔗 https://github.com/danielddemissie   📍 Addis Ababa, ET

SUMMARY

I have 3+ years of experience with software development majorly in web development. I have full-stack web development experience in delivering robust back-end services and efficient front-end applications. I'm keen on learning new technologies and frameworks.I have the ability to learn quickly and apply new skills to existing problems. I'm open to new experiences to build a challenging career in software development and polishing solution development techniques through practical work. I bring unmatched success to the organization through the maximum possible effort.

EXPERIENCE

Full Stack Developer

PhishFort   📅 2023   📍 Remote

Phishfort Provides The easiest way to protect customers, brand, and revenue from attacks. Detect and takedown phishing websites, mobile app clones, and fake social media content.

- Design and Implemented a Fullstack cross-browser extension with Nest and React that also have dedicated user dashboard
- Collaborated within a team of five professionals to conceptualize, architect, and implement a comprehensive dashboard to facilitating efficient incident management for our analysts, primarily focusing on the handling of scam reports.
- Refine complex legacy code to deliver a browser extension with clean code.
- Efficiently Used Firebase, Cloud function and Google cloud CDN for better performance
- Worked with latest development tools like ClickUp, Notion and others

Full Stack Developer

Addis Software   📅 08/2019 - 12/2022   📍 Addis Ababa, ET

Addis Software PLC is a Software and information technology company in Addis Ababa, Ethiopia serving clients nationwide and worldwide.

- Design and architecture phases of a project which primary objective was to streamline the event planning and organization workflow for event organizers.
- Worked with the MERN stack to deliver a type safe robust fullstack applications
- Write clean, efficient, and reusable code in Reactjs , Nodejs

Full Stack Developer

Utentic   📅 06/2019 - 09/2021   📍 Remote

Utentic is one of top exiting startups in Ethiopia and they are building a community for travelers where you can find the best travel groups, engage with other travelers, and go on unforgettable trips.

- Design and develop back-end and user interface components.
- Build scalable APIs in Nodejs with Express
- Solve technical problems of moderate scope and complexity.
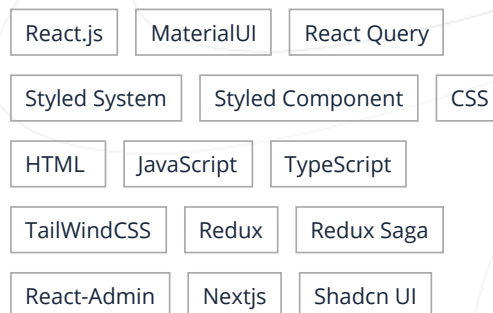

EDUCATION

Bsc in Computer Science and Engineering

Adama Science and Technology University

📅 2015 - 2019

SKILLS

Client-side

React.js | MaterialUI | React Query

Styled System | Styled Component | CSS

HTML | JavaScript | TypeScript

TailWindCSS | Redux | Redux Saga

React-Admin | Nextjs | Shadcn UI

Server-side

Nodejs | Express | Mongoose | Prisma

Socket.io | Adminjs | JOI | Passport

JWT | Cloudinary | Python | Nestjs

Databases

PostgreSQL | MongoDB

Tools and Services

Git | Github | Gitlab | CI/CD | Linting

Docker | AWS | Firebase | GCP

ONLINE CERTIFICATES

AWS Fundamentals: Building Serverless Applications

PROJECTS

NightHawk

📍 Remote

🔗 https://nighthawk.phishfort.com/

Played a significant role in the design and architecture phases of a cross-browser extension, dedicated to ensuring secure browsing experiences for the cryptocurrency community. This extension serves as a robust protective measure, shielding users from potential online threats and scams across various web platforms and social media channels.

· Refine the legacy code base with clean and scalable code
· Implement dashboard for user to manage their nighthawk account and be part of Guardian community by reporting scam.
· Implement latest tech-stack like ReactQuery for better performance
· Build robust nodejs API with Nestjs framework

Payne

📍 Remote

🔗 https://payne.phishfort.com/login

Collaborated within a team of five professionals to conceptualize, architect, and implement a comprehensive dashboard to facilitating efficient incident management for our analysts, primarily focusing on the handling of scam reports. The objective was to streamline and enhance the takedown process for a more effective and organized response to potential threats and security incidents.

· Help to reduce internal analyst time for incident takedown
· Make better communication with client and analyst
· Integrate takedown classifier machine learning engine to the dashboard
· Work with latest tech stack like Nextjs

Behiwot.com

📍 Addis Ababa

🔗 https://behiwot.com

Played a significant role in the design and architecture phases of a project which primary objective was to streamline the event planning and organization workflow for event organizers, concurrently providing regular users with an intuitive platform for discovering and participating in events that they can share with their social circles.

· Converted complex Figma design to clean and maintainable React.js
· Deliver secure and easy-to-use api with Node.js, Express.
· Increased client options to accept payment from users locally and worldwide.
· I was able to improve the platform's state management by implementing redux with redux-saga on the front end and improving the MongoDB aggregation code.

PERSONAL PROJECTS

ZeMovies

Self

ZeMovie is a what-to-watch site with React.js powered by ThemovieDB AP
